

Write an ALP that will append 20 times the same single character entered by the user at the end of the file *mfn2.txt*. The size of the files can vary. The character entered by the user should be displayed on screen. You can assume that the file is already available in the bin folder.

For e,g, if the contents of the file before execution was

When you are curious you will find lots of things to do.

And if the character entered by the user is 'r'

Then after execution the contents of the file should be

When you are curious you will find lots of things to do.rrrrrrrrrrrrrrrrrrrr
