Write an ALP that will display all characters in the file *mfn2.txt* starting from the offset entered by the user. The size of the files is 56 bytes. <u>The character entered by the user should not be displayed on screen.</u> You can assume that the file is already available in the bin folder. The user can enter any offset from 0 to 9.

For e,g, if the contents of the file are

When you are curious you will find lots of things to do.

And if the character entered by the user is 6 the display must be

ou are curious you will find lots of things to do.
